AUTO-HINGE Flag Type

Door closer + hinge, All-In-One. Quiet and smooth operation is achieved by the hydraulic pressure mechanism and advanced spring technology. Simple design with fully adjustable self-closing feature offers aesthetic appearance and refined functionality to the door.

Butterfly Type (300 Series) P.3

- Small and slim, ideal for lightweight doors (indoor use).
- The butterfly design makes installation highly efficient.
- Non handed - Can be used for both right and left hand opening doors.

Flag Type (100 / 1000 / 2000 Series) P.3

- Designed with cutting edge technology from Nitto Kohki. Easy to install on all kinds of swing doors (regular rectangle doors, arch doors, etc).
- Variety of models available for different size and type of doors (wooden, aluminum, lightweight steel, steel and glass doors).

Drip-proof Type
700 series P.18

- Made in highly durable stainless steel with special sealing mechanism.
- Commercial grade, widely applicable for various locations including bathrooms, seashores etc.

Drip-proof Type
PC series P.20

- Drip-proof design, suitable for outdoor use or moist area.
- Adopts an actuator with unique temperature sensor, ensuring consistent closing speed all year round.

For glass doors
NK series P.26

- Suitable for glass doors 8 to 12 mm thick

	Empty hinge NK150R-SC	NK150L-SC		-	-	-							

One set comes as a pair of hinges; a spring hinge and a damper hinge (except for empty hinges).
 The models including "R" in the model number are for the right-hand opening doors, and "L" are for the left-hand opening doors. The 300 series is non handed, can be used for both right-hand and left-hand opening doors.
 Choose left-hand or right-hand opening type when ordering.
 The models including "S" in the model number come with a hold stop function (with internal stop mechanism).
 The models with "T" or "AT" at the end of the model number have tap holes (M6) on the hinge leaf. Same model without tap holes are also available. (Example: 143R-T with tap holes, 143R without tap holes)
 The empty hinges come as a single set.

Installation procedure

300 series - P. 27, 1000 series - P. 28, 1000F series - P. 29, 2000 series - P. 30, 100/200/NK series - P. 31, 700 series - P. 32, PC series - P. 33

Mounting position / Handling precautions - P. 34

Extending comfort in many different scenes.

Nitto Kohki's Flag Type Auto Hinges

Suitable for all kinds of swing doors. Offers aesthetic appearance to the door.

Flag Type

300, 1000, 2000, 100, and 200 series

Simple design

The Auto Hinge is a door hinge with integrated door closer, providing the door a neat-looking. The simple and beautiful design matches different door styles.

Wide range of application

The Auto Hinge can be also used on the arch doors or doors without top jamb for which the common overhead door closers are not readily compatible.

Sufficient door-closing power

The 100 and 200 series incorporate two different springs (weak and strong) along with a clutch switching mechanism, exhibiting sufficient door-closing power even with its slim body.

Internal stop mechanism

The "S" models come with an automatic mechanism that stops and holds the door. With the 300 series, stops at any position from 85° to 180° (free stops). With the 1000 series, at any position from 85° to 180° (free stops) or at 85°. With the 100 and 200 series, at 85° and 150°.

Simple adjustment for closing speed

The door closing speed can be easily adjusted with a screwdriver.

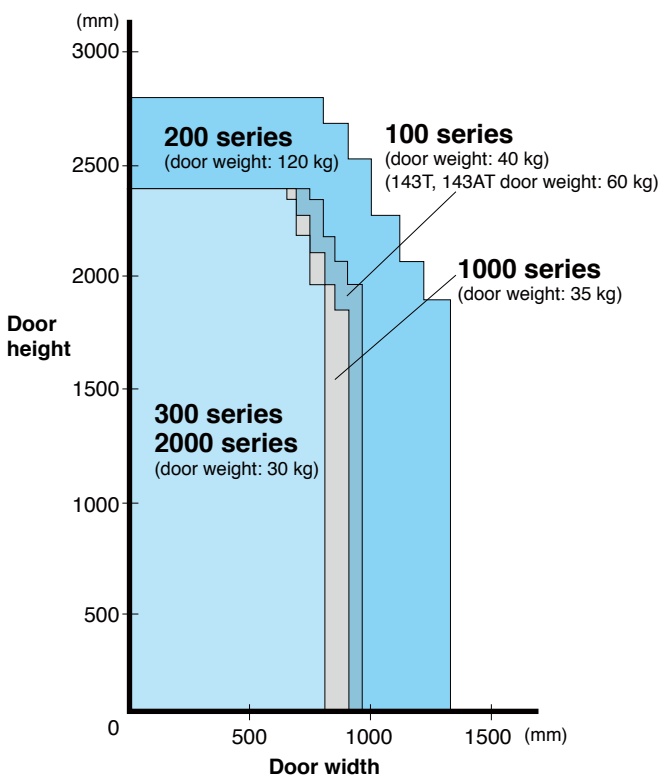

Easy to install

The Auto Hinges are installed in exactly the same manner as conventional flag-type hinges. Installation can be done easily with minimal time and labor.

Outstanding durability

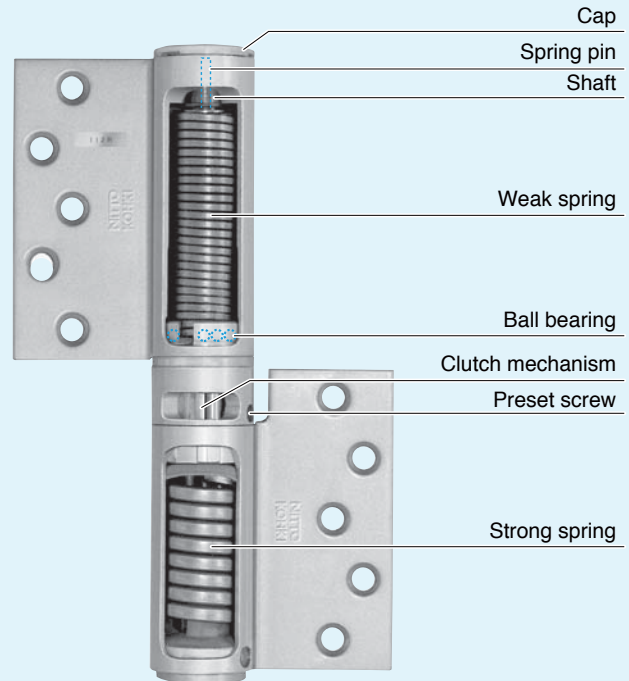

The Auto Hinge is designed and constructed as to undergo minimum friction, achieving outstanding durability and long life time.

Table of applicable door size:

Spring hinge

(with an internal self-closing and stop mechanism)

Damper hinge

(with an internal control mechanism for closing speed)

- Each model consists of a spring hinge and a damper hinge.
- This diagram represents the structure of the 100 series.

Model Number		Door Size Applicable (mm)			Door Weight (kg)	Closing Force (Nm)	Stop Mechanism	Location of Stop	Max. Opening Angle	Surface Color
		W	H	D						
311S		800(Max)	2000(Max)	30(Min)	30(Max)	5.0	○	85°-180°	180° Left or Right One-side Opening	Silver Bronze ivory gold
Empty Hinge	310					—	—	—		

● Available for both right-opening and left-opening doors.

EXTERNAL DIMENSIONS

Remarks

1. Surface treatment: By baked coating of melamine resin.
2. If using on the wooden doors: The door must be made of hard wood such as lauan or harder.
3. The tapping screws supplied with the products for fitting are 25 mm long. In case of using the hinges on the wooden frame, make sure that the frame is thicker than 25 mm. In case of using on an aluminum or lightweight steel doors, prepare metal screws (M5 countersunk head screws).
4. Allow at least 3 mm of space between the outer edge of door and the frame.

1. For reinforcement purpose, put a steel plate of at least 2.3 mm thick and 300 mm long at the point of the frame that the hinge leaves will be fitted.
2. Use the M6 countersunk head screws for fitting. (Screws are not included.) Refer to the dimensions in the square (□) when cutting the leaf. (Do NOT weld.)
3. In case of applying to the fire protection door, use the model 143R-AT or 143L-AT without the stop function.
4. Allow at least 5 mm of space between the outer edge of door and the frame.
5. Surface treatment: By baked coating of melamine resin.
6. Always install a door stopper to prevent the door from opening more than 180°.

2. Use the M6 countersunk head screws for fitting. (Do NOT weld.) Screws are not included.
3. In case of applying to the fire protection door, use the model 244R-T or 244L-T without the stop function.
4. Allow at least 5 mm of space between the outer edge of door and the frame.
5. Surface treatment: By baked coating of melamine resin.
6. Always install a door stopper to prevent the door from opening more than 180°.

FITTING DIAGRAMS

Employs special sealing technology and highly durable stainless steel.

Suitable for wide range of use, including in bathrooms and at seashores.

Offers beautiful and harmonized appearance with exterior/interior equipment.

Stainless steel, Flag Type

700 series

Simple design

The Auto Hinge is a door hinge with integrated door closer, providing the door a neat-looking. The simple and beautiful design matches different door styles.

Wide range of application

Suitable for wide range of service locations, including bathrooms, seashores and other outdoor environments.

Employs high-endurance stainless steel for rust, corrosion and stain resistance.

About three times corrosion-proof as the PC type Auto Hinge. (At least 500 hours tested in a salt spray)

Dew-proof by a special sealing structure

Achieves long life by special surface treatment.

About twice durable as the PC type Auto Hinge. (At least 200,000 open/close cycle tested)

Outstanding durability

The advanced low-friction structure achieves outstanding durability.

Internal stop mechanism

The "S" models come with an internal stop mechanism that stops and holds the door at 85° and 150°.

Simple adjustment for closing speed

The door closing speed can be easily adjusted with a screwdriver.

No need of adjusting the door-closing speed with temperature change

The 700 series adopts an actuator with unique temperature sensor.

You only need to set the ideal door closing speed at initial installation, and the closing speed stays consistent without being affected by the change in the ambient temperature.

Easy to install

The Auto Hinges are installed in exactly the same manner as conventional flag-type hinges. Installation can be done easily with minimal time and labor.

Compatible with the exterior products made of stainless steel.

Table of applicable door size for the 700 series:

700series

Model 733

Model Number		Door Size Applicable(mm)			Door Weight (kg)	Closing Force (N·m)	Stop Mechanism	Location of Stop	Max. Opening Angle	Surface Color
Right hand door	Left hand door	W	H	D						
733R	733L	900(Max)	2100(Max)	40(Min)	120(Max)	15.0	—	—	180° Left or Right One-side Opening	Shine gray
733SR	733SL									
Empty Hinge	730R					730L	—	—		

Remarks

1. Surface treatment: By baked coating of acrylic resin on the stainless steel.
2. For reinforcement purpose, put a steel plate of at least 3.2 mm thick and 300 mm long at the point of the door/frame that the hinge leaves will be fitted. Fix the steel plate directly on the framework.
3. M5x16 countersunk head screws are included.
4. Allow at least 5 mm of space between the outer edge of door and the frame.
5. Always install a door stopper to prevent the door from opening more than 180°.
6. Avoid using them in sauna rooms.

FITTING DIAGRAMS

Consistent door closing speed at anytime

Various unique features (automatic temperature compensation and drip-proofing) in a slim body

Provides a neat-looking to the exterior doors.

Flag Type PC series

High reliability
in severe outdoor
environments.

Simple design

The Auto Hinge is a door hinge with integrated door closer, providing the door a neat-looking. The simple and beautiful design matches different door styles.

Drip-proof type withstanding outdoor use

Being drip-proof, the PC models can be used for entrance doors exposed to outside air and gate doors exposed directly to rain.

No need of adjusting the door-closing speed with temperature change

As the PC series has adopted the internal actuator with temperature sensor, you only need to set the ideal door closing speed at initial installation, and the closing speed stays consistent without being affected by the change in the ambient temperature.

Easy to set the door-closing speed

The door closing speed can be easily adjusted with a screwdriver.

Easy to install and handle

The PC series, as well as the other models (100/200/700 series), is installed in exactly the same manner as conventional flag-type hinges.

Outstanding durability

The Auto Hinge is designed and constructed as to undergo minimum friction, achieving outstanding durability and long life time.

Equipped with an internal stop mechanism

The models including "S" in the model number come with a hold stop function (with internal stop mechanism) and stop and hold the door at 85° and 150°.

Table of applicable door size for the PC series:

Spring hinge

(with an internal self-closing and stop mechanism)

Damper hinge

(incl. an internal closing speed control mechanism with a temperature compensator)

- Each model consists of a spring hinge and a damper hinge.
- This diagram represents the structure of the PC series.

Remarks

1. If using on the wooden doors and frame: The door must be made of hard wood such as lauan or harder.
2. Surface treatment: By baked coating of melamine resin.
3. The tapping screws supplied with the products for fitting are 35 mm long. In case of using the hinges on the wooden frame, make sure that the frame is thicker than 35 mm.
4. Allow at least 5 mm of space between the outer edge of door and the frame.
5. Always install a door stopper to prevent the door from opening more than 180°.

300 series

Installation procedure

- Set up the hinges after hanging the door.

Spring hinge

- Hang the door, then remove the cap.

- Open the door by about 10° to 15°. Drive the supplied spring pin securely into the installation hole according to the mounting instruction. Place the cap back on the hinge.

- Open the door by about 90°. Turn the preset screw counterclockwise by 3 to 4 turns, then make it stick out from the hinge surface by about 1 mm.

Damper hinge

- Turn the speed adjustment screw according to the instructions given on the cap of the damper hinge, then adjust the door-closing speed. After finishing the adjustment, place the cap back on the hinge.

Cautions for installation

- Align the spring hinge and damper hinge carefully and make sure they are lined up straight.

Removal of the door

- ① Open the door by about 90°. Turn the preset screw clockwise by 3 to 4 turns. Make sure the preset screw is back to the original position as supplied from the factory.
- ② Close the door. The door should stop at about 5° position. Remove the spring pin as shown in the figure on the left. (Do not push or close the door before removing the spring pin.)
- ③ To make the spring work again, use a new spring pin.

1000 series

Installation procedure

- Set up the hinges after hanging the door.

*When hanging the door, align the notch on the shaft of the damper hinge with the hole in the door-side hinge body.

Spring hinge

- Open the door by about 5° to 15°. Drive the spring pin (silver color) securely into the spring pin set hole according to the mounting instruction.

- Open the door by about 5° to 15°. Drive the set pin (silver) securely into the spring pin set hole according to the mounting instruction. The set pin is located inside the upper cap of the spring hinge.

- Next, open the door by about 30°. Pull out the black pre-set pin.

- Place the pre-set pin (black) into the cap and keep it there for future use.

Damper hinge

- Tighten the hex socket set screw located at the side of damper hinge with the supplied hex key.

- Remove the cap. Turn the speed adjustment screw inside the damper hinge by screwdriver and adjust the door closing speed to the desired speed. Place the cap back to the hinge.

Removal of the door

To remove the hinge from the door, follow all steps exactly backward as you installed it to the door.

- ① Loosen the shaft socket screw located at the side of damper hinge.
- ② Remove the cap from the spring hinge and take the stored pre-set pin from the cap. Open the door by about 30°. Drive the pre-set pin securely into the pre-set pin hole. (If the pre-set pin is not fixed securely, it may come out and cause the spring get loose.)
- ③ Close the door until about 5° position. Remove the spring pin as shown in the drawing on the left. Now you can take off the hinge.
- ④ It is dangerous to remove the fitting screws when the spring is still wound.

1000F series

Installation procedure

- Set up the hinges after hanging the door.

*When hanging the door, align the notch on the shaft of the damper hinge with the hole in the door-side hinge body.

Spring hinge

- Open the door by about 5° to 10°. Drive 2 pcs x set screws securely into the set screw holes according to the mounting instruction.
*Use the supplied set screws only.

- Tighten both set screws (M4) with the supplied hex key.

- Open the door further by additional 30° or more. Remove the pre-set pin as shown the above figure.

Damper hinge

- Tighten the hex socket set screw located at the side of damper hinge with the supplied hex key.

- Remove the cap. Turn the speed adjustment screw inside the damper hinge by screwdriver and adjust the door closing speed to the desired speed. Place the cap back to the hinge.

Caution

After setting, check the operation of the free stop function and confirm it works properly. Noise may be generated if the set screws(2 pcs) are loose. In such case, remove the cap from the spring hinge and tighten the set screws securely.

- If you want to use the product as regular door hinge without self-closing or stop functions, follow the instructions below.
 - ① Adjust the closing speed of the damper hinge to maximum fast.
 - ② Remove the cap from the spring hinge. Open the door by about 45° and insert the pre-set pin (stored in the cap) fully into the pre-set pin hole.
 - ③ Close the door to about 5° to 10° position. Loosen and remove the set screws (2 pcs.) with the hex key (M4).

*Contact Nitto Kohki or distributors near you to learn about a non-standard method of use and other questions.

2000 series

Installation procedure

- Set up the hinges after hanging the door.

*When hanging the door, align the notch on the shaft of the damper hinge with the hole in the door-side hinge body.

Spring hinge

- Hang the door, then remove the cap. Open the door by about 5° to 30°.

- Drive the supplied set pin securely into the installation hole according to the mounting instruction.

- Open the door by about 90°. Turn the preset screw counterclockwise, then make it stick out from the hinge surface.
- DO NOT operate the door before driving the set pin.
- After finishing the adjustment, place the cap back on the hinge.

Damper hinge

- Turn the speed adjustment screw according to the instructions given on the cap of the damper hinge, then adjust the door-closing speed. After finishing the adjustment, place the cap back on the hinge.

Removal of the door

- ① Open the door by about 90°. Turn the preset screw clockwise. Make sure the preset screw is back to the original position as supplied from the factory.
- ② Close the door. The door should stop at about 15° position. Remove the spring pin as shown in the figure on the left.
- ③ The spring hinge becomes free and the door can be removed.

*Do not push or close the door before removing the spring pin. Failure to do so may cause an accident.

*It is dangerous to remove the fitting screw when the set pin is still wound.

*Be sure to release the spring force from the door before removing the door. Failure to do so may cause an accident.

100/200/NK series

Installation procedure

- Set up the hinges after hanging the door.

*When hanging the door, align the notch on the shaft of the damper hinge with the hole in the door-side hinge body.

Spring hinge

- Remove the cap.

- Drive the spring pin.
- Open the door by about 10°. Align the spring pin with the installation hole and drive it securely according to the instructions given on the mount. Use the supplied spring pin only. Do not use any other screw as alternative.

- Open the door by about 90°. Turn the preset screw counterclockwise by 3 to 4 turns, then make it stick out from the hinge surface by about 1 mm. DO NOT operate the preset screw before driving the spring pin.

Damper hinge

- Remove the cap. Turn the speed adjustment screw inside the damper hinge by screwdriver and adjust the door closing speed to the desired speed. Place the cap back to the hinge.

Removal of the door

- ① Open the door by about 90°. Turn the preset screw clockwise by 3 to 4 turns. Make sure the preset screw is back to the original position as supplied from the factory.
- ② Close the door. The door should stop at about 5° position. Remove the spring pin as shown in the figure on the left. Carefully remove the door. (Do not push or close the door before removing the spring pin.)
- ③ When hanging the door again, make sure that the door is put back at the same angle as it was removed. (The angle to which the notch on the damper shaft is faced.)

700 series

Installation procedure

- Set up the hinges after hanging the door.

*When hanging the door, align the notch on the shaft of the damper hinge with the hole in the door-side hinge body.

Spring hinge

- Remove the cap.

- Drive the spring pin.
- Open the door by about 10°. Align the spring pin with the installation hole and drive it securely according to the instructions given on the mount. Use the supplied spring pin only. Do not use any other screw as alternative.

- Open the door by about 90°. Turn the preset screw counterclockwise by 3 to 4 turns, then make it stick out from the hinge surface by about 1mm. DO NOT operate the preset screw before driving the spring pin.

Damper hinge

How to hang the door

- Align the label on the cap with the notch on the shaft.
- Before installed, there is a gap between the door-side hinge body and the frame-side hinge body of the damper hinge. This gap will disappear as soon as once the door get hung, and the self-closing speed adjustment will become available. After hanging the door, confirm the gap is gone.
- Remove the cap. Turn the speed adjustment screw inside the damper hinge by screwdriver and adjust the door closing speed to the desired speed. Place the cap back to the hinge.

How to set the door-closing speed

Removal of the door

- ① Open the door by about 90°. Turn the preset screw clockwise by 3 to 4 turns. Make sure the preset screw is back to the original position as supplied from the factory.
- ② Close the door. The door should stop at about 5° position. Remove the spring pin as shown in the figure on the left. Carefully remove the door. (Do not push or close the door before removing the spring pin.)
- ③ When hanging the door again, make sure that the door is put back at the same angle as it was removed. (The angle to which the notch on the damper shaft is faced.)

*Contact Nitto Kohki or distributors near you to learn about a non-standard method of use and other questions.

*Should any hinge break, pull out the spring pin (refer to "Removal of the door") and turn the speed adjustment screw to the maximum fast. You can then use the hinge as a regular door hinge without self-closing/stop functions.

Installation procedure

- Set up the hinges after hanging the door.

*When hanging the door, align the notch on the shaft of the damper hinge with the hole in the door-side hinge body.

Spring hinge

- Remove the cap.

- Drive the spring pin.
- Open the door by about 10°. Align the spring pin with the installation hole and drive it securely according to the instructions given on the mount. Use the supplied spring pin only. Do not use any other screw as alternative.

- Open the door by about 90°. Turn the preset screw counterclockwise by 3 to 4 turns, then make it stick out from the hinge surface by about 1 mm. DO NOT operate the preset screw before driving the spring pin.

Damper hinge

How to hang the door

- Align the label on the cap with the notch on the shaft.
- Before installed, there is a gap between the door-side hinge body and the frame-side hinge body of the damper hinge. This gap will disappear as soon as once the door get hung, and the self-closing speed adjustment will become available. After hanging the door, confirm the gap is gone.
- Remove the cap. Turn the speed adjustment screw inside the damper hinge by screwdriver and adjust the door closing speed to the desired speed. Place the cap back to the hinge.

How to set the door-closing speed

Removal of the door

- ① Open the door by about 90°. Turn the preset screw clockwise by 3 to 4 turns. Make sure the preset screw is back to the original position as supplied from the factory.
- ② Close the door. The door should stop at about 5° position. Remove the spring pin as shown in the figure on the left. Carefully remove the door. (Do not push or close the door before removing the spring pin.)
- ③ When hanging the door again, make sure that the door is put back at the same angle as it was removed. (The angle to which the notch on the damper shaft is faced.)

*Contact Nitto Kohki or distributors near you to learn about a non-standard method of use and other questions.

*Should any hinge break, pull out the spring pin (refer to "Removal of the door") and turn the speed adjustment screw to the maximum fast. You can then use the hinge as a regular door hinge without self-closing/stop functions.

Auto Hinges

Mounting position for Flag Type Auto Hinges

- In case the sub door does not require the self-closing function, you may use the empty hinges for the sub door so as to match the appearance with the master door.

*The diagram shows the left hand opening wooden door.

Handling precautions

- Attach the hinge leaves in parallel with the door frame.

- Do not bend the hinge leaves.

- Do not hit or strike the hinge.

- Do not open the door more than 180°.

If the door is open more than 180°, it will damage the clutch mechanism and the door may stop opening/closing. To avoid this, always install a door stopper.

- Do not use the hinges in the place with high moisture or direct water splash. (Except PC and 700 series)water.

- Do not weld the hinge leaves.

- Do not bend the hinge leaves. Also, do not use the hinges in the place exposed to extremely strong wind.
