

## **Blowing The Competition Away!**

265 words

Nitto Kohki will be releasing an array of new air blowers throughout 2014 which are set to step-change technical expectations within aeration applications such as domestic sewage treatment, biogas & fish-breeding.

Already renowned for the unsurpassable performance and life expectancy of their unique diaphragm-less “Linear-Shuttle” LA Series air blowers, their new LA-ECO range will bring this technology to new customers who’s demand is for low power consumption. Taking the LA-60ECO as an example; its 35W is 45% lower than the LA-60B.

Rick Faulkner; Nitto Kohki’s UK Pump Sales Manager commented “*We are excited about these new blowers and the opportunities they will bring in 2014 and beyond; our R&D guys in Tokyo have really done a fantastic job and I am confident our customers will feel the same!*”

Normal manufacturers’ warranties apply and lifetimes should easily exceed 5-10 years dependant on operating parameters and atmospheric conditions. The air filter can be changed with a simple “flick of a clip” and a full service only takes 10 minutes, which is complemented by a step-by-step service video on their web-site; [www.nitto-kohki.eu](http://www.nitto-kohki.eu) In addition to the LA-ECO range, they will be introducing the LAM-150 to complement their highest flow unit: the LAM-200 as well as a new version of their ever popular LA-45.

Besides their air blowers, Nitto Kohki manufacture OEM air, vacuum & liquid pumps in Linear-shuttle, linear diaphragm and conventional style diaphragm designs.

Within their other sales units, their success extends to the manufacture of pneumatic, hydraulic and electric power & machine tools as well as a catalogue full of quick-release gas and liquid couplings.
